SDL Machine Translation by default uses baseline translation engines.

If you want to improve quality beyond what they can deliver, you can create customizations matching your own data.

SDL iMT Consultancy offers support in creating and improving custom built Machine Translation solutions.

Using experience gathered in over 10 years of engine training, we can build the best solution for your data and use case, and help you retain quality as your business evolves.

Intelligent Machine Translation:
The future is here with SDL iMT Consultancy

Why have Customizations?

Machine Translation usually starts with the baseline engines, which can deliver excellent results in many environments.

But if you have large volumes of data reflecting your own style and terminology, you may want to beat the baseline.

The common way to achieve this is to build your own customized engine, based on your own data.

How to Create Customizations

For an out of the box solution, with no need to train your own team, we can create engines for your languages and data.

Our experts can look back on years of building engines, allowing them to choose parameters based on a history of previous trainings, involving different procedures and quality tests. Over this time, we developed an internal toolset for handling data and trainings, to deliver the best engine in a quick turnaround timeframe.

An alternative is to use SDL BeGlobal Trainer to train engines yourself; the iMT team can also assist with that.

Introducing your MT roadmap, the way you want it. Get your quote today!
Quality Maintenance

Once you started using customizations, they need maintenance.

The content you translate will change, adapting to new developments, styles and terminology.

To keep performing at its peak, the engine will need regular retraining. The iMT team can advise on frequency of retraining and perform the retraining for you.

iMT can built engines for you if you want to:

• have machine translation that is closer to your data than the baselines
• benefit from years of experience in the iMT team
• save the time to train up in-house experts
• keep engines up to date with your content and style

SDL (LSE: SDL) allows companies to optimize their customers’ experience across the entire buyer journey. Through its web content management, analytics, social intelligence, campaign management and translation services, SDL helps organizations leverage data-driven insights to understand what their customers want, orchestrate relevant content and communications, and deliver engaging and contextual experiences across languages, cultures, channels and devices.

SDL has over 1,500 enterprise customers, over 400 partners and a global infrastructure of 70 offices in 38 countries. We also work with 72 of the top 100 global brands.
